## HIGH SPEED, ON-THE-FLY INSPECTION

SE500ULTRA incorporates CyberOptics' patented 3-D sensing technology that uses white strobe light acquiring full FOVs with each strobe and minimizing vibration effects - delivering good accuracy and consistent repeatability. You can measure ANY PCB surface - including flexible circuits - as white light causes minimum diffusion. With its continuous image acquisition, you can be assured of fast, focused and reliable inspection.

## FEEDBACK, FEED FORWARD READY

SE500ULTRA fully supports feedback and feed forward capability with leading Solder Paste Printer and SMT Mounter vendors respectively. With simple configuration settings, SE500ULTRA gives you the power to do more with SPI results - optimize printing process, establish stencil cleaning cycles and fine-tune printer setup. All this means reduced rework costs, increased production throughput and improved yields.

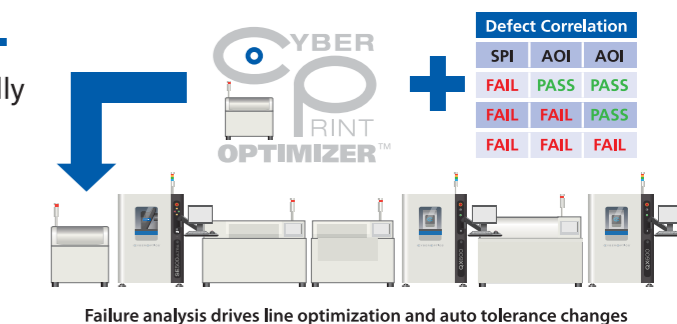

## CYBERPRINT OPTIMIZER™ READY

EM Asia Innovation Award for CyberPrint OPTIMIZER™

CyberPrint OPTIMIZER™ automatically optimizes the print process by proactively analyzing accurate trend data – *first-ever in the industry!* Pre-defined templates help you get started quickly while customizable rules support perfect customization for specific product needs. CyberPrint OPTIMIZER™'s predictive process improvement gets you better yields and reduces downtime.
